

PRODUCT OVERVIEW

Security Risk Management

Six Degrees Group is a leading hosting and managed services provider to the UK mid-market. The company specialises in delivering application performance management, monitoring, reporting and security, deployed on hybrid public/private cloud platforms of innovation. Everything Six Degrees does is underpinned by its data centres, data network and voice switching infrastructure.

As a specialist managed IT services organisation, Six Degrees (6DG) Capital Support understands security to a level of detail that can bring value to our customers. Investment in our own security, specifically in our ongoing work to align ourselves to ISO 27001:2013, has taken us on a journey that improves our organisation. We are confident that, by providing customers with access to our Chief Information Security Officer (CISO) for a series of audits and reviews, we can help you understand and mitigate your risks, in addition to improving your compliance to Financial Conduct Authority (FCA) and the US Securities and Exchange Commission (SEC) regulatory requirements.

How it Works

Consult and Report

Over four days, our CISO will engage with your business to identify security risks and produce a comprehensive report. This report will form the basis of the next stage, where we support your planning and remediation. We will measure your compliance in alignment with the SEC/OCIE (Office of Compliance, Inspections and Examinations) or ISO 27001:2013 regulations.

Gap Analysis and Actions

The report becomes your plan of action. We will support you with template policies, be at the end of a phone to help with security-specific requirements, represent you with investors, and meet with you quarterly to formally review progress.

Ongoing Services

There are a number of ongoing elements to the Security Risk Management service, through which 6DG Capital Support will deliver to your business:

- Annual completion of a security audit aligned to ISO 27001 or the SEC/OCIE
- Delivery of an audit report relating to the security assessment agreed by the customer (either ISO 27001 or SEC/OCIE)
- Agree an action plan for those identified risks that require action
- Support resolution of risks as identified
- Scheduled quarterly update meeting to measure progress to an agreed plan
- Attend quarterly meetings to discuss and agree plan for the next period
- Provide template policies and other documents from our security library for the unfettered use of the customer
- Provide distance support for security questions, queries and other *ad hoc* requests.

Why do I need Security Risk Management?

Security is a continual undertaking. It requires constant engagement across an organisation and a keen understanding of what is or is not an acceptable risk, assessed in exactly the same way that you would manage any other investment.

Before you make any changes or deploy any technology, you need to understand what risks you have. Normally this undertaking would require a significant up-front investment. But with the Security Risk Management service from Six Degrees Capital Support, you pay a monthly fee and get access to our Chief Information Security Officer (CISO) for a series of audits and reviews.

Let us help you

Security Risk Management is just one solution from our compelling product portfolio structured and designed to solve your business security needs. With incredible support from our passionate in-house engineers alongside an innovative offering to create the solution that you need, we will be happy to help.
