

Cloud Assessments

Our Cloud Assessments are designed to help you understand your infrastructure and potential cloud adoption workloads while collaboratively identifying how they slot in with your overarching business goals.

Quantitative and Qualitative Analysis

Any business that has a cloud strategy needs to unravel how to execute it. Effective transformation requires an accurate inventory of IT that maps infrastructure, applications and their dependencies.

A Six Degrees' Cloud Assessment can dually help your business. First, it helps you understand the quantitative state of your current and, perhaps, unknown infrastructure in addition to indicating what might be suitable to move to the cloud. Then, we identify qualitative detail indicating how to optimise that transition, maintaining cost-efficiency and increasing the productivity of your business.

Why a Cloud Assessment?

By analysing your systems and interdependencies, we guide your business to successfully progress along your cloud journey. Our cloud specialists present the results to you, identifying wastage, security risk and any potential gaps. A proposal is aligned to your priorities, based on factual discussions with stakeholders. All are done to build a better business model for you.

Scope

Our Cloud Assessment provides you with:

- A view across your physical or virtual Windows and Linux Servers,
- Raw data collection for up to 30 days to capture month-end activity,
- Multi-cloud cost analysis, pricing options and recommendations,
- Consultative-led workshop mapping inventory data to operational and business logic to build a meaningful proposal.

Key Phases in our Assessment:

1. Kick-off and agreement of business priorities
2. Prerequisite completion and tool deployment
3. Data collection and monitoring
4. Data analysis and consultative workshop
5. Result review and proposal presentation

Features and Benefits

- Multi-Cloud economics before transition
- Accelerate transformation based on facts
- Smarter use of IT resources
- Minimise IT security risks and downtime
- Investment/divestment decision on result
- SC cleared staff for highly regulated environment
