

# Six Degrees Cyber Clinic

Free cyber security advice and best practice guidance.

For more information contact your Account Manager or email [cyberclinic@6dg.co.uk](mailto:cyberclinic@6dg.co.uk)

Has your organisation had to mobilise its remote workforce quickly in response to the COVID-19 pandemic and developing UK Government guidance? Are your users receiving an increased number of malicious phishing emails and other cyber-attacks? Are you concerned about the cyber security risks associated with the rapid adoption of new and potentially unsecure applications? The Six Degrees Cyber Clinic delivers **free cyber security advice and best practice guidance** to help your organisation remain secure during this period of uncertainty.

What is the Six Degrees Cyber Clinic?

The Six Degrees Cyber Clinic is a place where our clients can receive expert pragmatic advice during these times of changed working practices.

What type of questions can be asked?

You can ask any question about how you can implement cyber security best practices to protect your organisation's operations.

How does it work?

Just email your questions to [cyberclinic@6dg.co.uk](mailto:cyberclinic@6dg.co.uk) and we will distribute to a relevant consultant who will respond to you.

How will they respond?

Your expert will book a time to call you via Microsoft Teams.

Is there an SLA on responding?

There is not a set SLA, but you should expect a response in between 24 and 48 hours.

Is this an incident response helpline?

This is not an incident helpline. The Cyber Clinic is a way of allowing you to ask for advice on issues you are experiencing, as opposed to an emergency detect and remediate service.

Who are the consultants?

All consultants are part of our delivery teams. Their skills include PCI DSS, ISO 27001, Solutions Architects, NIST, CREST and CHECK penetration testers, BCP specialists and operational security experts.

## Your hub for cyber security support

### Weekly webinars

Our weekly webinars provide 30 minute quickfire sessions that equip you with the latest information, advice and event updates.

### Cyber Intelligence Reports

Weekly reports produced by our Cyber Intelligence Team provide important insights into the threat landscape during this period.

### Cyber security blogs

We have a range of blogs written by our experts that tackle everything from remote working through to how to spot phishing scams.
